

NCS Technologies is a leading technology solutions provider. Founded in 1996, we have continuously delivered IT products and services to enterprises, government agencies, and the U.S. military. We take pride in our innovation, agility, and responsiveness in meeting our customers' needs.

WHO WE ARE

NCS began our journey as a private label PC manufacturer. We grew and prospered by developing strong and agile business practices and a manufacturing infrastructure that allows us to quickly adapt to market conditions and sustain our growth. Our manufacturing heritage endows us three lines of business today: *Specialized System Integrator, Custom Computer Manufacturer, and 3D Print Provider*. Our revenue is mainly derived from product-based services and manufacturing activities that must take place in the U.S. to meet our customers' unique security, technical, and logistic requirements. Supplying and supporting us is a network of over 200 technology OEMs worldwide. This extensive network enables us to promptly meet our customers' widely divergent needs.

OUR CORE CAPABILITIES

Over the past 28 years, we have developed an extensive skill set and plenty of experience in designing, engineering, integrating, and manufacturing computers. Our well-trained, talented, and dedicated workforce operate a secure 108,000sqft facility equipped with a fully automated manufacturing line, a large scale software imaging system, and a distribution center capable of producing 1,250 End User Devices per day and 65 fully rugged servers per week. We also operate a 3D print manufacturing facility with 6 different technologies from 6 different OEMs. To reach our customers in CONUS, OCONUS, and remote OCONUS locations, we have built an extensive network of 3rd party logistics partners and freight carriers. Our in-house Help Desk provides technical support and customer service, allowing us complete control over the quality of our care.

Complementing our technical prowess is a solid multi-facet business practice that includes business development, sales, and proposal, solutions, and product, program, project, and contract management. We are serving Federal agencies and the U.S. military under multiple ID/IQ or GWAC contracts, Prime System Integrators under subcontracts with Government flow down requirements, and Independent Software Vendors under Manufacturing Service Agreements. Our Integrated Management System are registered to ISO 9001 for quality management, 14001 for environmental stewardship, and 28000 for supply chain security management. At the same time, we practice Supply Chain Risk Management rigorously to acquire only original, genuine, and untainted parts. Our

financial wherewithal is also substantial to undergird our business and foster its growth.

SPECIALIZED SYSTEM INTEGRATOR

END-USER DEVICE MANAGED SERVICES

NCS offers a suite of solutions to comprehensively prepare end-user devices for immediate out of the box. We also manage them through all phases of their lifecycle from device activation to data sanitization and disposal and provide our customers with options to move from the CAPEX to OPEX financial models.

RACK-SCALE SERVICES

NCS specializes in incorporating multiple systems and devices into racks. We acquire the necessary hardware and fabricate unique cables, plastic, and metal parts that are needed to securely hold every device. To simplify maintenance after deployment we document the build and label every cable and port. We can also build-to-print each rack as specified by our customers.

WORKFORCE SOLUTIONS

Customers turn to us to acquire compute and print solutions for their edge workers. We select and modify transit cases that will hold the exact devices our customers need for their specific transportation and field usage environmental requirements.

LOGISTICS SERVICES

Logistics for high-value and sensitive IT hardware requires specialization. Our 45,000 sqft climate-controlled warehouse has strict access control, 24/7 surveillance, is fully insured and operated by only U.S. Persons providing complete inventory management service. We dispatch shipments globally, host DCMA inspections, and process DD Form 250s, Material Inspection and Receiving Reports.

ACQUISITION SERVICES

Our decades-long relationships with over 200 OEMs and all national IT product distributors, coupled with strong financial backing, a robust NIST-based Supply Chain Risk Management program, and the ability to source TAA-compliant products, set

us apart. This comprehensive approach ensures we source only genuine, untainted products while safeguarding against counterfeit goods.

CUSTOM COMPUTER MANUFACTURER

RUGGED SERVERS

Packaging COTS IT hardware in enclosures of different dimensions and form factors to operate reliably in harsh environments aboard warfighting platforms is a skill we have refined for decades. Our engineers rely on modern technologies, including 3D printing and scanning, robots, and a readily accessible on-site environmental testing lab, to rapidly develop systems for our customers to deploy.

OEM APPLIANCE

DEVELOPMENT SERVICES

NCS specializes in developing server appliances to serve as platforms for Independent Software Vendors (ISVs) to distribute their software. We assist ISVs from initial requirement studies, through hardware resource analysis, to engineering, manufacturing, deployment, and field support. With our support, ISV customers can allocate their attention and resources to what they do best – developing their software, while relying on our expertise and resources to accelerate their time to market.

HPE RUGGEDIZATION SERVICES

Through a partnership with HPE, we customize certain server models for customers needing to use the same servers in their data centers and field environments.

We provide our customers with a selection of reference HPE platforms from which to choose. Alternatively, our customers can also specify the models they require. Our innovative customization methods, rapid prototyping resources, and support from HPE enable us to quickly develop and deliver products, giving our customers the ability to deploy the same models across all of their operating areas.

3D PRINT PROVIDER

LIFECYCLE SERVICES

The flexibility and efficiencies of additive manufacturing (3D Print) operations are now at your fingertips. As an authorized reseller of the leading brands, we proudly represent HP, Roboze, AM Solutions, UPNano, Photocentric, UltiMaker, Raise 3D, and Nidec. Our OEM partners offer a unique set of printing capabilities from the types of materials such as polymers, super polymers, and metals to printing technologies such as MJF, DLP, SLS, Open FDM, and Advanced FDM.

3D SERVICE BUREAU

We leverage 3D printing technologies in our facility to produce high-quality parts to meet our customers' prototyping and manufacturing needs. Designs, drawings, physical and structural attributes for each job are reviewed to select the best and most cost-effective technologies and materials. We maintain strict physical and network security protocols at our facility to safeguard such required information. Our customers' IP are always safe in our possession..

FACTS ABOUT NCS

Business Status:	Small (under principle NAICS and others)
UEI ID:	MDTGPS4LMMR5
CAGE:	1BEK6
Principle NAICS:	541519 (ITVAR with fewer than 150 employees) 334111 (Electronic Computer Manufacturing) Plus many others
ISO Registration:	9001:2015, 14001:2015, 28000:2007, and 20243:2018
Security Practice:	ITAR compliant manufacturing and logistics operations CMMC Level 2 C3PAO Certified
